Information

Create Repository

Enter a file path of a directory on your local filesystem, along with the shortname you want to use to refer to this repository. If a Mercurial repository exists at the given location MachHg will start managing it. If no Mercurial repository exists at the given location, MachHg will create a new repository at the given location and start managing the files in the directory at the given location.

ShortName: tom_tools

Local Path: /htdocs/codeigniter/tom_tools
