

FAST, FLEXIBLE AND FUN: REVISION CONTROL WITH MERCURIAL

Martin Geisler
<mg@aragost.com>

PyZH: Zurich Python User Group
June 29th, 2010

ABOUT THE SPEAKER

Martin Geisler:

- ▶ huge fan of Python :-)
- ▶ core Mercurial developer:
 - ▶ reviews patches from the community
 - ▶ helps users in our IRC channel
- ▶ PhD in Computer Science from Aarhus University, DK
 - ▶ spent 2005 as an exchange student at ETH Zürich
- ▶ now working at aragost Trifork, Switzerland

KEY CONCEPTS

Alice

KEY CONCEPTS

KEY MERCURIAL COMMANDS

Local commands:

- ▶ **hg commit**: save a snapshot into the current repository.
- ▶ **hg update**: checkout revision into working directory.
- ▶ **hg merge**: join different lines of history.

Network commands:

- ▶ **hg pull**: retrieve changesets from another repository.
- ▶ **hg push**: send your changesets to another repository.

MOVING CHANGESETS AROUND

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

BRANCHES

A key concept:

- ▶ parallel lines of development
- ▶ used to track releases
- ▶ used to isolate disruptive changes

MERGING

The opposite of branching:

- ▶ combines two branches
- ▶ used to merge back bugfixes
- ▶ used to integrate feature branches

MERGING

The opposite of branching:

- ▶ combines two branches
- ▶ used to merge back bugfixes
- ▶ used to integrate feature branches

MERGING

The opposite of branching:

- ▶ combines two branches
- ▶ used to merge back bugfixes
- ▶ used to integrate feature branches

MERGING

The opposite of branching:

- ▶ combines two branches
- ▶ used to merge back bugfixes
- ▶ used to integrate feature branches

BRANCHES IN SVN

Subversion knows nothing about branches!

- ▶ but SVN has a cheap copy mechanism
- ▶ used for tags and branches

BRANCHES IN SVN

Subversion knows nothing about branches!

- ▶ but SVN has a cheap copy mechanism
- ▶ used for tags and branches

r10

```
trunk/  
  hello.c  
  Makefile  
branches/  
tags/
```

BRANCHES IN SVN

Subversion knows nothing about branches!

- ▶ but SVN has a cheap copy mechanism
- ▶ used for tags and branches

BRANCHES IN SVN

Subversion knows nothing about branches!

- ▶ but SVN has a cheap copy mechanism
- ▶ used for tags and branches

MERGING BRANCHES IN SVN

The support is incomplete and fragile:

- ▶ renamed files are not merged correctly
- ▶ old clients will not update the merge info

MERGING BRANCHES IN SVN

The support is incomplete and fragile:

- ▶ renamed files are not merged correctly
- ▶ old clients will not update the merge info

From the SVN Book:

The bottom line is that Subversion's merge-tracking feature has an **extremely complex** internal implementation, and the `svn:mergeinfo` property is the only window the user has into the machinery. Because the feature is **relatively new**, a numbers of edge cases and possible unexpected behaviors may pop up.

—*Version Control with Subversion*

(Mercurial has robust built-in support for merging branches.)

WRAPPING UP

THE UNDERLYING MODEL

A Mercurial changeset conceptually consist of:

- ▶ 0–2 parent changeset IDs:
 - ▶ root changeset has no parents
 - ▶ normal changesets have one parent
 - ▶ merge changesets have two parents
- ▶ date, username, commit message
- ▶ difference from first parent changeset
- ▶ changeset ID is computed as SHA-1 hash of the above
- ▶ makes it impossible to inject **malicious code** on server

BROWSING THE HISTORY OF A FILE

The `hg annotate` command is invaluable:

- ▶ you see when each line was introduced
- ▶ you can quickly jump back to earlier versions

History of Mercurial's README file:

```
3942: Basic install:
 445:
3942: $ make           # see install targets
3942: $ make install   # do a system-wide install
3942: $ hg debuginstall # sanity-check setup
3942: $ hg               # see help
  0:
# ...
```

Better interface in `hg serve`

SEARCHING FILE CONTENT

Ever wondered when a function was introduced?

- ▶ `hg grep` can help you!

Example: When was `hg forget` introduced?

```
% hg grep --all 'def forget' commands.py
commands.py:8902:+:def forget(ui, repo, *pats, **opts):
commands.py:3522:-:def forget(ui, repo, *pats, **opts):
commands.py:814:-:def forget(ui, repo, file1, *files):
commands.py:814:+:def forget(ui, repo, *pats, **opts):
# ...
```

REVISION GRAPH BISECTION

You've found a bug! When was it first introduced?
Use `hg bisect` to mark good and bad revisions:

DEMONSTRATION

WRAPPING UP

MERCURIAL IS EXTENSIBLE

You can add new functionality to Mercurial:

- ▶ ships with 30+ extensions
- ▶ wiki lists 75+ extensions
- ▶ extensions can change basically everything
- ▶ helps to keep the core small and focused

WRAPPING UP

MIGRATING HISTORY

The **convert** extension can import history:

- ▶ CVS, SVN, Git, Bazaar, Darcs, ...
- ▶ incremental conversion
- ▶ many options for fiddling with branches, authors, ...

MIGRATING HISTORY

The **convert** extension can import history:

- ▶ CVS, SVN, Git, Bazaar, Darcs, ...
- ▶ incremental conversion
- ▶ many options for fiddling with branches, authors, ...

Interestingly, **convert** can import from Mercurial:

- ▶ **--filemap** lets you exclude and rename files
- ▶ **--branchmap** lets you rename branches

INTERFACING WITH SUBVERSION

The `hgsubversion` extension let's you:

- ▶ use `hg clone` on a SVN URL
- ▶ use `hg pull` to convert new SVN revisions
- ▶ use `hg push` to commit changesets to SVN server

Goal: make `hg` a better Subversion client than `svn`!

WRAPPING UP

MERCURIAL IN A NUTSHELL

Mercurial changes the way you develop:

- ▶ simple yet strong model for **both** branching and merging
- ▶ power tool instead of necessary evil
- ▶ light-weight and snappy
