

In spanish, you write, for instance, “máximo”, and “límite”, and the corresponding math operators max and lim (with backslash, of course) automatically put the accent. But you get horrible results with beamer if you use T1 encoding:

$$\text{máx}\{2, 3\} = 3.$$

$$\lim_{n \rightarrow \infty} \frac{1}{n} = 0$$

They work properly without T1 encoding or without beamer.
