

utf82html convert UTF-8 byte sequences to numeric html entities

doc generated from the script with [gendoc](#)

bash script, version=1.02

Synopsis

```
utf82html [options | file [file...]]
```

Options:

```
-h  print help  
-V  print version
```

Description

utf82html, with the -I option, installs an ELF binary with the same name which reads UTF-8 encoded text from standard input or from one or more files specified by the argument and write those to stand output after replacing any non-ASCII characters with numeric html values (assuming UTF-8 encoding)
